Subject: West Lake Landfill - Area 1 and 2 work plan

Paul,

Per our discussion yesterday afternoon, EPA expects parties to perform the sediment sampling around Area 1 and Area 2 either following a significant precipitation event or at the end of drilling activities. We have discussed this issue with MDNR and agreed to ensure that at the very least, 3 sediment samples are taken at the end of the Area 1 and 2 characterization activities as directed in our prior comments (not as a contingency). Final location of those samples and will be determined based upon consultation with EPA and State staff who will be in the field performing oversight of this work. Samples need to be collected under the EPA approved site QAAP it is our intent to collect QA split samples from the sediment and RIM sampling. If parties are not willing to collect the sediment samples as anything other than contingency, then EPA will collect the samples. Call me if you have any questions.

Regards,
